AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A black composition comprising as indispensable components a titanium nitride oxide, a resin an acrylic resin and a solvent, wherein a weight ratio of the titanium nitride oxide to the acrylic resin is within the range of between 75/25 to 60/40; wherein X-ray intensity ratios R₁ and R₂ represented by the Equations (1) and (2) below, respectively, satisfy the relationships represented by Formulae (3) and (4) below:

$$R_1 = I_3 / \{I_3 + 1.8(I_1 + 1.8I_2)\}$$
 (1)

$$R_2 = I_2/I_1 (2)$$

$$0.70 \le R_1 \le 0.82 \quad R_1 > 0.70 \tag{3}$$

$$0.85 \le R_2 \le 1.80 \tag{4}$$

wherein I_1 represents the maximum diffraction intensity of the titanium nitride oxide when the angle of diffraction 20, determined by using $CuK\alpha$ line as the X-ray source, is 25° to 26°,

 I_2 represents the maximum diffraction intensity of the titanium nitride oxide when the angle of diffraction 20 is 27° to 28°,

 I_3 represents the maximum diffraction intensity of the titanium nitride oxide when the angle of diffraction 20 is 36° to 38°, and

wherein a black coating film obtained from said black composition has an optical density (OD value) of not less than 4.4 per 1 μ m of film thickness,

wherein the transmittance of i-ray <u>ultraviolet light</u> through a resin black matrix obtained from said black composition is more than 0.2% when the OD value is 2.0, and

wherein the minimum exposure energy required for photo-curing is not more than 60 mJ/cm².

- 2. (Original) The black composition according to claim 1, wherein said X-ray intensity ratio R₁ is not less than 0.80.
- 3. (Previously Presented) The black composition according to claim 1, wherein said solvent has a boiling point of 120°C to 180°C, and a viscosity of 3 mPa·s to 10 mPa·s.
- 4. (Cancelled).
- 5. (Previously Presented) The black composition according to claim 1, further comprising an organosilane hydrolysis condensate.
- 6. (Previously Presented) The black composition according to claim 1, further comprising a compound having a siloxane bond and a carbon-carbon double bond in a single molecule and having no silanol group.
- 7. (Previously Presented) The black composition according to claim 6, wherein said compound having a siloxane bond and a carbon-carbon double bond in a single molecule and having no silanol group has the structure represented by the following Formula (7):

$$CH_{2} = C \qquad \begin{cases} R^{3} \\ R^{2} \\ Si - O \end{cases} \qquad \begin{cases} R^{5} \\ Si - R^{2} \\ R^{4} \end{cases} \qquad C = CH_{2}$$

$$CH_{2} = C \qquad \begin{cases} R^{3} \\ Si - O \\ R^{4} \end{cases} \qquad C = CH_{2}$$

$$R^{1} \qquad C = CH_{2} \qquad (7)$$

wherein each R¹ independently represents hydrogen or alkyl group; each R² independently represents an organic group containing amide bond, imide bond, ester bond or urethane bond; R³ to R⁶ independently represent alkyl group; and n represents an integer of 1 to 3.

- 8. (Cancelled).
- 9. (Previously Presented) The black composition according to claim 1, further comprising carbon black.
- 10. (Cancelled).
- 11. (Previously Presented) A black composition comprising as indispensable components a titanium nitride oxide and a resin; wherein X-ray intensity ratios R_1 and R_2 represented by the Equations (1) and (2) below, respectively, satisfy the relationships represented by Formulae (3) and (4) below:

4

$$R_1 = I_3 / \{I_3 + 1.8(I_1 + 1.8I_2)\}$$
 (1)

Application No. 10/575,776 Docket No.: 0760-0353PUS1

$$R_2 = I_2/I_1$$
 (2)

$$R_1 > 0.70$$
 (3)

$$0.85 < R_2 < 1.80 \tag{4}$$

wherein I_1 represents the maximum diffraction intensity of the titanium nitride oxide when the angle of diffraction 2θ , determined by using CuK α line as the X-ray source, is 25° to 26° , I_2 represents the maximum diffraction intensity of the titanium nitride oxide when the angle of diffraction 2θ is 27° to 28° , I_3 represents the maximum diffraction intensity of the titanium nitride oxide when the angle of diffraction 2θ is 36° to 38° ; and wherein the transmittance of iray when the optical density (OD value) is 2.0 is more than 0.2%.

- 12. (Original) The black coating composition according to claim 11, wherein said X-ray intensity ratio R₁ is not less than 0.80.
- 13. (Previously Presented) The black coating composition according to claim 11, wherein said resin is at least one selected from the group consisting of an acrylic resin and a polyimide resin.
- 14. (Previously Presented) The black coating composition according to claim 11, wherein the weight ratio of said titanium nitride oxide to said resin is within the range between 75/25 and 60/40.

5 ADM//mao

- 15. (Previously Presented) The black coating composition according to claim 11, which has an optical density (OD value) of not less than 4.4 per 1 µm of film thickness.
- 16. (Cancelled).
- 17. (Previously Presented) The black coating composition according to claim 11, further comprising a compound having a siloxane bond and a carbon-carbon double bond in a single molecule and having no silanol group.
- 18. (Previously Presented) The black coating composition according to claim 17, wherein said compound having a siloxane bond and a carbon-carbon double bond in a single molecule and having no silanol group has the structure represented by the following Formula (7):

$$CH_{2} = C \qquad \begin{cases} R^{3} \\ R^{3} \\ R^{5} \\ R^{5} \\ C = CH_{2} \end{cases}$$

$$CH_{2} = C \qquad \begin{cases} R^{3} \\ R^{3} \\ R^{5} \\ R^{5} \\ C = CH_{2} \\ R^{6} \\ C = CH_{2} \\ R^{1} \end{cases}$$

$$CH_{2} = C \qquad R^{1} \qquad (7)$$

wherein each R^1 independently represents hydrogen or alkyl group; each R^2 independently represents an organic group containing amide bond, imide bond, ester bond or urethane bond; R^3 to R^6 independently represent alkyl group; and n represents an integer of 1 to 3.

- 19. (Previously Presented) The black coating composition according to claim 11, further comprising carbon black.
- 20. (Previously Presented) A resin black matrix obtained from said black coating composition according to claim 11.
- 21. (Original) A color filter for liquid crystal displays, which color filter comprises said resin black matrix according to claim 20.
- 22. (Original) A liquid crystal display comprising said color filter for liquid crystal displays, according to claim 21.
- 23. (Previously Presented) A resin black matrix obtained by exposing and developing a black coating film obtained by coating said black composition according to claim 1 on a substrate.
- 24. (Previously Presented) A color filter for liquid crystal displays, which color filter comprises said resin black matrix according to claim 23.
- 25. (Previously Presented) A liquid crystal display comprising said color filter for liquid crystal displays, according to claim 24.

Docket No.: 0760-0353PUS1

26. (Previously Presented) The black composition according to claim 1, further comprising a photopolymerizable monomer and a photoinitiator.
